

14_Data_Room_Index.md

Kristal Farms – Data Room Index

Document status: Partner-facing control index

Package: Kristal Farms Partner Documentation

Version: v0.1 draft

Geographic focus: Labrador coast, with Nain as the first target community

Primary use: Tell partners what materials exist, which files are authoritative, and which materials are external, NDA-only, or internal archive.

1. Purpose

This data room index organizes the Kristal Farms partner documentation package into a clean two-level system:

Level 1 – Partner decision documents

Short, polished, strategic, externally readable.

Level 2 – Due diligence appendices

Technical, detailed, evidence-heavy, shared after partner interest and, where appropriate, NDA.

The goal is to avoid handing partners a raw compilation. Partners should receive a coherent package built around the Labrador coast thesis:

Nain first. Labrador coastal replication second. Community-scale hydro, compute, heat reuse, fibre connectivity, black-box tenancy, and community benefit as the core model.

2. Data room principles

1. **One source of truth per topic.**

Each topic should have one authoritative partner-facing document. Supporting files may exist, but should not contradict the current package.

2. **Partner-facing first.**

External files should be short, polished, specific, Labrador-focused, and evidence-based.

3. **No raw brainstorming.**

Internal Q&A, older strategy drafts, vendor notes, and broad national/global concepts belong in the source archive unless cleaned and approved.

4. **No overclaiming.**

Unvalidated financial claims, unconfirmed hydro numbers, unresolved governance details, and speculative timelines must be marked as preliminary or excluded.

5. **Nain is the initial target.**

Other Labrador coastal communities are treated as replication candidates, not as equal first-stage sites.

6. **Heat-first architecture governs the package.**

The current model places data containers near village heat users, not at a remote dam. The project exports compute by fibre and reuses server heat locally.

7. **Black-box tenancy is a hard boundary.**

Host-side monitoring is limited to physical infrastructure metrics. Tenant data, application logs, model content, and packet payloads remain outside the host boundary.

3. Level 1 — Partner decision documents

These are the first files to share with a serious partner.

File	Status	Purpose	Share level
00_Kristal_Farms_Partner_Overview.md	Current draft	Main 4–6 page partner entry document. Explains the whole opportunity without requiring other files.	External
01_Partner_Ask_and_Roles.md	Current draft	Defines partner types, what Kristal Farms brings, what the partner brings, and immediate decision points.	External
02_Labrador_Coast_Project_Thesis.md	Current draft	Explains why the project is focused on Labrador coastal communities, with Nain first.	External
03_Cost_Advantage_and_Strategic_Rationale.md	Current draft	Explains why the model is structurally advantaged: no long HV buildout, natural cold, heat reuse, modular pads, marine logistics, export compute not electrons.	External
06_Technical_Architecture.md	Current draft	Partner-facing technical architecture for hydro integration, village substation,	External / NDA depending on detail

File	Status	Purpose	Share level
		pad yard, container interfaces, cooling, heat loop, fibre/NOC, and phasing.	
07_Heat_Recycling_and_Community_Value.md	Current draft	Core differentiator document linking technical design to public-building heat, homes, greenhouse, diesel displacement, and community value.	External
08_Connectivity_and_Black_Box_Tenancy.md	Current draft	Explains fibre dependency, NOC architecture, host/tenant boundaries, and black-box tenancy.	External / NDA depending on tenant detail
11_Governance_FPIC_and_Community_Benefits.md	Current draft	Frames FPIC, community benefits, governance principles, and open design items.	External
13_Risk_Register.md	Current draft	Partner diligence summary of major risks, mitigations, owners, and next evidence required.	External / NDA depending on owner detail

4. Level 2 — Due diligence appendices

These files support deeper review after initial partner interest.

File	Status	Purpose	Share level
04_Project_Map_and_Site_Inventory.md	Current draft pending KML/CSV validation	Explains project map layers, site inventory logic, included/excluded sites, and current map/data file status.	External / NDA depending on map precision
05_Labrador_Coast_Hydro_Screening_Appendix.md	Current draft	Technical appendix for candidate hydro sites, exclusions, screening criteria, data gaps, and required next studies.	NDA preferred
09_Commercial_Model_and_SLA.md	Current draft	Commercial model, SLA framework, metering, tenant eligibility, revenue categories, cost categories, and reversibility.	NDA preferred
10_Project_Roadmap_and_Decision_Gates.md	Current draft	Phase/gate plan from partner alignment to site validation, FPIC, pre-feasibility, pilot pad, heat loop, and expansion.	External / NDA depending on dates
12_Metrics_Dashboard_and_Aud	Current draft	Defines project metrics, public	External

File	Status	Purpose	Share level
it_Framework.md		scorecard, reporting cadence, quarterly review, and annual audit structure.	
14_Data_Room_Index.md	Current draft	Controls package structure, source hierarchy, share levels, and authoritative file list.	External

5. Maps and data files

These files should be grouped under a **maps/** folder when available.

File	Status	Purpose	Share level
kristal_farms_LABRADOR_COAST_PROJECT_ONLY_colored.kml	Pending upload / validation	Visual map layer for Labrador coast project sites and exclusions.	NDA or external depending on precision
kristal_farms_LABRADOR_COAST_PROJECT_ONLY_feature_inventory.csv	Pending upload / validation	Structured site inventory for project features, candidate sites, and map objects.	NDA or external depending on precision
kristal_farms_LABRADOR_COAST_PROJECT_ONLY_validation.csv	Pending upload / validation	Validation table for source status, inclusion/exclusion logic, and evidence gaps.	Internal / NDA

Rule: Do not finalize site claims in partner documents until map files and source references are validated.

6. Authoritative source documents

The following current source files are the main basis for the partner package.

Source file	Use in package	Authority level
Documentation Kristal Farms.docx (2)(1).md	Governance, FPIC, black-box tenancy, SLA logic, metrics, unresolved design items.	Tier 1
Kristal Farms – Heat Recycling Plan (3)(1).md	Heat-first design, village siting, two sealed circuits, reuse/store/reject hierarchy, public heat, greenhouse, thermal metrics.	Tier 1
Kristal Farms (intro) – Cost Advantage & Strategic Rationale (3)(1).md	Cost stack, avoided HV transmission, natural cold, heat value, modular pads, marine logistics, export compute not electrons.	Tier 1
Kristal Farms Internal Reference Document.docx (3)(1).md	System architecture, local hydro integration, MV connection, village substation, compute pads, cooling, operations, phasing.	Tier 1
Potentiel hydroélectrique isolé au Nunavik et	Hydro screening, Labrador/Nunavik comparison, excluded	Tier 1, technical

Source file	Use in package	Authority level
au Labrador (≥ 15 MW).docx (2)(1).md	sites, Nain/Fraser River preliminary basis.	
EC8ADFDE-9E2F-11F0-9303-BF2B70071435.pdf	Article-style synthesis, black-box pads, reuse/storage/reject hierarchy, FPIC, Kristals layer, community wealth framing.	Tier 1 synthesis

7. Supporting diligence sources

These documents may support due diligence, appendices, or internal background, but should not define the first partner package.

Source file	Use	Treatment
Containerized Data Centers – Vendor Landscape, Use Cases & Lessons.docx.md	Vendor landscape, modular data center examples, procurement context.	Due diligence / appendix
Comparable Projects – AI Knowledge Systems & HydroContainer Data Centers.docx.md	Comparable projects and Kristals-related precedents.	Due diligence / appendix
Modular AI Farms at Hydropower Sites – Feasibility & Cooling System Design.docx.md	Cooling design, modular deployment risks, technical feasibility context.	Technical support

Source file	Use	Treatment
Northern Hydropower for Compute – Opportunities, Cooling Advantage & Strategy.docx.md	Broad northern hydro/cooling opportunity framing.	Background only
Comprehensive Program Outline – Hydropowered Containerized AI & Kristals (Canada).md	National Canada framing and broader program structure.	Use selectively; not Labrador spine

8. Internal source archive

The following categories should remain internal unless cleaned, validated, and shared under NDA.

99_INTERNAL_SOURCE_ARCHIVE/

raw_compilation/

old_nunavik_material/

internal_q_and_a/

vendor_landscape/

comparable_projects/

old_maps/

generated_working_csvs/

old_canada_global_strategy/

old_manicouagan_material/

kristals_background/

Internal-only or archive-first documents

Source file	Reason for archive treatment
Program Blueprint & Section Outline for a Green AI Compute Initiative.docx.md	Useful for structure, but too broad and not Labrador/Nain-specific.
Rapport détaillé – Infrastructure d’IA modulaire et bibliothèque de Kristals.docx.md	Useful for Kristals background, but too broad and narrative-heavy for first package.
Hydro-Backed Modular AI & Open Knowledge – Global Program Brief.docx.md	Global framing can distract from Labrador partner decision-making.
Hydro-Powered Container Compute – Global Collaboration & Competition Framework.docx.md	Broad geopolitical/collaboration framing; not appropriate for first partner package.
Government Proposal Outline – Hydropowered Containerized Data Centers & Turbine-Water Cooling (Manicouagan).docx.md	Manicouagan-focused; should not drive Labrador coast package.
Executive Brief – Kristals & Hydropowered Modular AI Data Centers (Canada).docx.md	Older Canada-wide framing; useful only after cleaning.
Green AI Compute & Knowledge Platform – Canada Strategy and Model.docx.md	Broad strategy source; avoid in first Labrador-focused package unless rewritten.

9. Partner package v1

Recommended first-meeting package:

Kristal_Farms_Partner_Package_v1/

00_Kristal_Farms_Partner_Overview.md

01_Partner_Ask_and_Roles.md

02_Labrador_Coast_Project_Thesis.md

03_Cost_Advantage_and_Strategic_Rationale.md

06_Technical_Architecture.md

07_Heat_Recycling_and_Community_Value.md

08_Connectivity_and_Black_Box_Tenancy.md

11_Governance_FPIC_and_Community_Benefits.md

13_Risk_Register.md

Add only after validation:

04_Project_Map_and_Site_Inventory.md

maps/

kristal_farms_LABRADOR_COAST_PROJECT_ONLY_colored.kml

kristal_farms_LABRADOR_COAST_PROJECT_ONLY_feature_inventory.csv

Hold for deeper diligence:

05_Labrador_Coast_Hydro_Screening_Appendix.md

09_Commercial_Model_and_SLA.md

10_Project_Roadmap_and_Decision_Gates.md

12_Metrics_Dashboard_and_Audit_Framework.md

14_Data_Room_Index.md

10. File naming and versioning

Use this convention:

NN_Title_With_Underscores.md

For controlled revisions:

NN_Title_With_Underscores_v0.1.md

NN_Title_With_Underscores_v0.2.md

NN_Title_With_Underscores_v1.0.md

Recommended status labels:

Draft

Internal review

Partner-facing draft

NDA draft

Approved external

Archived

Superseded

Every file should include:

Document status:

Version:

Date:

Audience:

Geographic focus:

Confidentiality:

Source basis:

11. Document dependency map

If writing this file	Complete or consult first
00_Kristal_Farms_Partner_Overview.md	Heat Plan, Cost Advantage, Internal Reference, Hydro Thesis
01_Partner_Ask_and_Roles.md	Overview, black-box tenancy, commercial model assumptions
02_Labrador_Coast_Project_Thesis.md	Hydro Potential, Cost Advantage, map/site inventory
03_Cost_Advantage_and_Strategic_Rationale.md	Heat Plan, Internal Reference
04_Project_Map_and_Site_Inventory.md	Hydro Screening Appendix, KML/CSV files
05_Labrador_Coast_Hydro_Screening_Appendix.md	Hydro Potential source validation

If writing this file	Complete or consult first
06_Technical_Architecture.md	Heat Plan, Internal Reference, Connectivity/Black-Box
07_Heat_Recycling_and_Community_Value.md	Heat Plan, metrics framework
08_Connectivity_and_Black_Box_Tenancy.md	Documentation Kristal Farms, Internal Reference
09_Commercial_Model_and_SLA.md	Partner Ask, Technical Architecture, Black-Box Tenancy
10_Project_Roadmap_and_Decision_Gates.md	Overview, Governance/FPIC, Risk Register
11_Governance_FPIC_and_Community_Benefits.md	Documentation Kristal Farms, community benefit principles
12_Metrics_Dashboard_and_Audit_Framework.md	Heat Plan, black-box metrics, SLA metrics
13_Risk_Register.md	All major docs
14_Data_Room_Index.md	All current and planned files

12. Files not for external distribution before cleanup

Do not share these in raw form:

- Internal Q&A files
- Older Nunavik-first drafts
- Manicouagan government proposal drafts
- Global collaboration / competition drafts

- Raw vendor landscape files
 - Raw comparable-project research
 - Generated working CSVs
 - Old maps
 - Unvalidated hydro tables
 - Any file containing speculative financial projections
 - Any file implying finalized governance powers where design remains open
-

13. Open items before partner release

Open item	Required action
Final Labrador-only KML	Upload, validate, and lock version.
Feature inventory CSV	Upload and check every site against source evidence.
Validation CSV	Mark included, excluded, preliminary, and data-gap items.
Nain hydro evidence	Validate any numerical power claims before external release.
Community governance	Separate confirmed principles from open design decisions.
Financial model	Keep out of non-NDA package unless validated.
Fibre status	Confirm available paths, redundancy, latency, and ownership before hard SLA claims.

Open item	Required action
Heat offtake	Confirm first public buildings, greenhouse sink, and thermal storage assumptions.
Environmental safeguards	Confirm permitting path for non-contact bay/seawater heat exchange.

14. Release rule

A document is ready for external partner use only when it passes this test:

1. It supports the Labrador coast / Nain-first thesis.
 2. It does not rely on outdated Canada-wide or global framing.
 3. It separates confirmed facts from preliminary assumptions.
 4. It avoids unvalidated financial or technical claims.
 5. It does not expose internal Q&A, unresolved governance, or raw source language.
 6. It gives the partner a clear decision path.
-

15. Summary

The data room should present Kristal Farms as a disciplined Labrador coast infrastructure opportunity, not as a loose collection of AI, hydro, and Kristals ideas.

The authoritative partner narrative is:

Kristal Farms develops village-sited modular compute pads on the Labrador coast.

Nain is the first target.

Power comes from local hydro through short MV connection.

Compute is exported by fibre.

Waste heat is reused locally for public buildings, homes, and greenhouse loads.

Tenants operate black-box containers.

Community value, FPIC, reversibility, and transparent metrics are built into the model.
